OTHER SOURCE(S): MARPAT 140:52345
 AB Derivs. of per(3,6-anhydro) cyclodextrins having the general formulas (I) and (II) are prepared which can be used for the separation or fixation of chromate, dichromate and/or manganate anions from water or as a pharmaceutical complexing agent for humans. R1 in the general formulas I and II represents -OCONHR2, OH, OR3, SH, SR3, OCOOR3, NH2, NHR3, NR3R4, CONR2, CONR3R4, CN, COOR3, OCH2COOH, or COOR, R3 and R2 represent an aliphatic, saturated or unsatd. group, R3 and R4 represent an aliphatic or aromatic hydrocarbon group which can be saturated or unsatd. and which can be substituted by halogen atoms or hetero atoms, such as O, S, and N, and n is 6, 7, or 8, or R1 represents the group OCONH(CR5R6)mNHCOOR7 with R5 and R6 being aliphatic saturated or unsatd. groups, and R7 represents glucosidic or maltosidic units of peranhydrocyclodextrin and m is a number from 1 to 20. Preferably, R1 of the per(3,6-anhydro) cyclodextrin derivative is -OCONHR2 with R2 being an Et or hexyl group and n being 6. The per(3,6-anhydro) cyclodextrin derivs. are prepared by reacting per(3, 6-anhydro) cyclodextrins having the general formulas (III) and (IV) with an isocyanate OCN-R2 or a diisocyanate OCN(CR5R6)mNCO. Polymers are obtained by reacting at least two per(3,6-anhydro) cyclodextrin derivs. having the general formulas III and IV with n and m being 6 and R5 and R6 being H. For the removal of anions from water the per(3,6-anhydro) cyclodextrin derivative or polymer is dissolved in an organic solvent immiscible with water.
